“BLUE RIBBON” FLOWERS

New Creations for 1938 Gardens

CALLIOPSIS

1628 **Golden Crown.** The advent of Golden Crown brings new interest to Calliopsis—one of the brightest of the garden's bright yellow cut flowers. Here is a rich golden yellow, larger than the well-known Golden Wave with semi-double, fragrant blooms and 12-in. wiry stems—worthy of a place in any good garden. Seed can be started early indoors, though it will come into blossom quickly if planted outdoors when danger from frost is past. **Originator's pkts. 35c.**

ANNUAL CHRYSANTHEMUM

2094 **Golden Crown.** The quilled petals, freedom of bloom, and certainty to produce 100% double, bright yellow flowers are remarkable features of this novelty that marks a great step forward in the development of this splendid annual as a first rank cut flower. As many as 50 to 60 blooms will be found on each 3 to 4-ft. bushy plant. Silvery green contrasting foliage. Start seed in a hotbed in March or outdoors in late April. Allow at least a foot between plants and pinch to induce branching.

Originator's pkts. 35c.

EXTRA EARLY COSMOS

Sensation. This is recognized as the leading early, giant-flowering type. What a picture these 4 to 6 ft. bushy plants present in August when in full bloom! Not only do the mammoth flowers decorate the garden, but they are especially valuable as cut flowers, so large and graceful are they. Blooming within 10 weeks from the sowing of seed, Sensation has prime interest to gardeners admiring the chaste beauty of early-flowering Cosmos. Plant at least 3 ft. apart to let the plants fully develop and disbud, if you wish to increase the size of the flowers that normally are 4 in. across. Broad, heavily fluted, overlapping petals mark this wonderful strain to which separate colors are now added.

2271 **Pinkie.** Rose pink. **Pkt. 25c., large pkt. 75c.**

2272 **Purity.** Snow white. **Pkt. 25c., large pkt. 75c.**

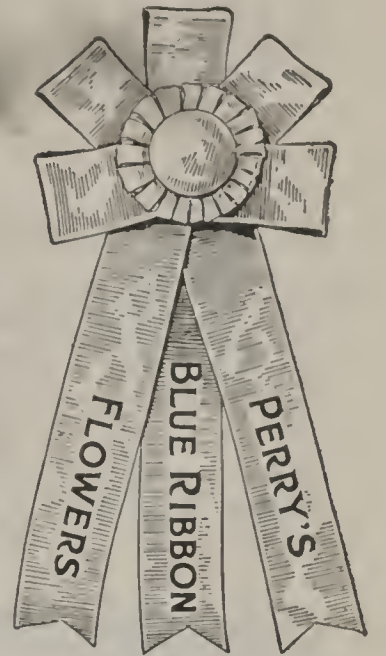

2273 **Sensation Mixed.** **Pkt. 20c., large pkt. 50c.**

LONG-SPURRED COLUMBINES

520 **Aquilegia longissima.** This is a fascinating new type of the popular hardy perennial, for the spurs are exceptionally long—5 in. or more. The petals are of deep yellow relieved with lighter sepals. 2 to 3 ft. tall. **Pkt. 50c.**

RUSSELL LUPINES

A new strain that has created a sensation in horticultural circles—the most outstanding perennial introduction in recent years. Awarded the Royal Horticultural Society's Gold Medal in June, 1937. Fancy 3½-ft. spikes with the upper 26 in. a solid mass of color and as much as 5 in. in diameter! The florets are extra large, fan-shaped and flat, and so arranged that almost no stem is discernible. The colors, too, are striking, rich, and in great variety—deep yellow, orange, red, and brilliant bicolors, shades never before found in Lupines. (Lupines are legumes and sometimes one fails to get a “catch” unless proper bacteria are present in the soil. As a precaution, inoculate with Legume-Aid at **15c.** per pkt.—enough for several pkts. of seed.)

Russell Lupines will produce gigantic spikes and in marvelous colors—shades never before seen in the species

3973 **Russell Lupines Mixed.** Original pkts., 12 seeds, **25c.**; 50 seeds, **65c.**; 120 seeds, **\$1.25.**

MARIGOLDS

4073 **Sunset Giants.** One of last year's novelties—that excited lots of favorable comment—a new type and the largest known. Our friends enthused over the unusual size of the flowers, equal to Dahlia-flowered Zinnias and their vivid shades of orange, light and deep yellow. Exceptionally free flowering, 3½ to 4 ft. tall and easily among the showiest plants in the garden. The huge, loosely formed, single and double flowers are definitely sweet and have rare cut flower value.

Pkt. 15c., large pkt. 35c.

4078 **Tom Thumb “Golden Crown.”** We were among the first to recognize the merit of this excellent English novelty and offered it last year. Those who grew it appreciated its value as a bright, dwarf, bushy plant for edgings. The flowers resemble Guinea Gold in size, form, and splendor. Being so floriferous, often with 25 to 30 blooms at once, it makes a gorgeous sight in the garden. The blooming period can be prolonged by starting seed indoors in March. **Pkt. 25c.**

NEW FLOWER SEED CREATIONS

For Brighter Gardens

NIEREMBERGIA (Dwarf Cup Flower)

4850 **Hippomanica.** From seed sown under glass in early Spring, compact, rounded little plants will grow and throw the first year an abundance of corymbs of salver-shaped, delicate lavender flowers an inch or more in diameter. A clear yellow eye will adorn each blossom. The plants that are hardy with protection outside become only 4 to 6 in. high and are highly ornamental; a gem outside. **Pkt. 35c.**

Nierembergia hippomanica is a novel, little plant for you to grow in your rock garden

EXCEPTIONAL PETUNIAS

5306 **Dainty Lady.** The nearest yellow to date—a good sized, single, fringed variety of a light, creamy yellow with a suffusion of golden yellow. Rather compact in habit, 15 in. tall, and useful for all purposes Petunias are adapted to. **Pkt. 50c.**

5331 **Salmon Supreme.** At last we have a salmon pink Petunia—one that is good for beds, borders and edgings. It received an Award of Merit in the 1938 All America Trials. It produces nicely rounded plants about a foot tall, branches freely and blooms with great freedom. Medium sized, single, plain edged flowers of a rich coral salmon and lighter throat mark this variety. Start seed indoors in March for a long season of bloom. **Originator's pkts. 35c.**

NOVEL ZINNIAS

8724 **Linearis.** A most interesting, dwarf, early blooming, miniature-flowered variety smothered with attractive, single blossoms. A lovely shade of golden-orange with a delicate lemon-yellow stripe through the center of each petal and boldly contrasting dark brown centers. It is easy of culture and will flower in about 6 weeks after sowing when only 5 to 6 in. high. The plants attain about 10 in. in height, but will spread to almost 2 ft. in width, and continue as a mass of flowers until frost. **Pkt. 25c., large pkt. 60c.**

8728 **Navajo** (Gaillardia-flowered). Delightful miniature flowers, most of them two-toned with a ring of deeper color toward the centers. About 2 in. in diameter with stems of medium length on 2-ft. plants and blooming in about 45 days from the sowing of seed. The colors of these mostly double flowers range through the mellow tones of rose, bronze, yellow, orange and lavender. **Pkt. 15c., large pkt. 50c.**

RUST-RESISTANT SNAPDRAGONS

Just as Wilt-resistant Asters have succeeded the ordinary strains, Rust-resistant "Snaps" are rapidly replacing others susceptible to that disease which often takes such toll in Milady's garden. Every garden maker ought to appreciate what commercial florists already know, that it pays to grow this rust-resistant strain. Why not grow a bed of them this year? The varieties we offer are a choice selection of the many now available.

GOLDEN FLOWER OF THE INCAS

8111 **Tithonia Fireball.** A splendid annual for backgrounds and a showy one remarkable for its freedom from diseases and pests. Fireball is an improved variety of the older variety in a vibrant shade of scarlet-orange and contrasting clear yellow centers. Start the seed indoors, set out after danger from frost in a warm sunny location, water freely and you will be rewarded with quantities of 4½ to 5 in. single, Daisylike blooms on long, stiff stems. Some plants may reach up to 9 ft. in height. When cut, the flowers keep surprisingly well. **Pkt. 35c.**

PERRY'S PRIZE ASTERS

Wilt most commonly occurs in the hot Midsummer months, just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The Remedy is to use **Wilt Resistant Strains** that have proven so valuable that wherever available we offer them to the exclusion of others. The Aster "yellows" is quite a different disease that can best be avoided by growing your crop under cloth to prevent infestation by the insects spreading it. Unless otherwise noted, all our seed is of a **Wilt Resistant Strain**.

FRANKLIN PARK LAWN SEED

TRADE MARK REGISTERED

The Best Mixture for Sunny Lawns

Every good lawn begins with good seed. **Franklin Park Lawn Seed** is good seed. It is recognized as a quality mixture for those who want the best. We blend it ourselves fresh every season from heavy, re-cleaned, live seeds of only those grasses known to be adapted to most all of our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. **Franklin Park** is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

BANK AND TERRACE MIXTURE

Sow for Quick Results and Permanence

A splendid mixture of varieties with strong, deep-spreading roots of quick growth. Most effectual in binding loose soils, and preventing slopes from being washed out by rains. Blended for adverse conditions and to produce a fine, smooth, velvety sod of a beautiful rich green. Broadcast 25 lbs. of 5-8-7 Fertilizer to each 1000 square feet and rake in lightly. Sow 1 lb. of our Bank and Terrace Mixture to each 250 to 300 square feet and rake again lightly and firm with a roller or the back of a spade. On steep slopes it may be well to sow a quart of seed oats to each 2 lbs. of seed to help retain the surface.

Only good lawn seed could have produced a splendid lawn like this. Franklin Park is a good lawn seed

This man is happy for it is a pleasure to mow a fine lawn produced by sowing Perry's Franklin Park Lawn Seed on properly prepared soil enriched with 5-8-7, a well-balanced plant food for lawns and gardens

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June Bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 5-8-7 to each 1000 square feet, especially under trees.

Sow **Franklin Park Lawn Seed in all sunny situations, Shady Spot elsewhere**, at the rate of 1 lb. to every 250 to 350 square feet. Make sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas.) Roll, if not sticky, with a water weight roller

For additional help we recommend "THE LAWN," Dickinson—the best book on the subject. \$1.25 postpaid

to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed and a minimum of dirt, chaff and weed seeds we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear dig them out promptly with a Sure Grip Weed Puller. (The Sure Grip is the most efficient weeder we have been able to discover. See page 47.) Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of **Franklin Park Lawn Seed** on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. (We sell several good rakes for the purpose.) With the lawn clean, fill in all hollows with good top-soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.

Perry's Special Purpose Grass Mixtures

Perry's Athletic Field Mixture

Admirably suited to all kinds of playgrounds that are subject to hard usage. All the grasses selected for this mixture are hardy, deep-rooted and wear-resistant. You will appreciate the quality we blend into this mixture, and the excellence of turf obtained on soils well-prepared and properly cared for. Sow 150 lbs. per acre.

Lb. 50c., 5 lbs. \$2.40, 10 lbs. \$4.50, 25 lbs. \$10.00,
100 lbs. \$38.00.

Perry's Bent Grass Mixture

For Those Who Appreciate Quality

A beautiful green lawn is the ambition of most home owners. Bent grasses make beautiful lawns in New England when given the necessary attention. More and more attention is being focused on Bent grasses because of the interest in golf clubs where so much Bent seed is used. To satisfy this demand we offer this mixture blended from a formula employing these fine bladed Bent grasses and calculated to produce through creeping root stocks on rich soil a closely matted turf of soft luxuriance.

Prepare your soil with unusual care and fertilize with 5-8-7 at the rate of 25 lbs. per 1000 square feet. Do not attempt to reduce the cost of starting a lawn by economizing on seed. As a rule, lawns are not large and the difference in cost between light and heavy seeding is not great. Sow seed at the rate of 1 lb. to each 250 square feet to secure a thick stand at the beginning and to assist in holding weeds in check.

Several times during the season broadcast ½ oz. of sulphate of ammonia mixed with six times its bulk of finely sifted soil to each square yard of surface.
Lb. \$1.25, 5 lbs. \$6.10, 10 lbs. \$12.00, 20 lbs. \$23.60,
50 lbs. \$58.00, 100 lbs. \$115.00.

Fair Way Mixture

Blended for Severe Conditions

This mixture is a combination of grasses of a dwarf spreading habit of growth, and unexcelled for laying out new fairways or for renovating old ones. Very carefully prepared and certain to produce a firm, permanent turf that will withstand severe usage and improve with age if properly cared for. Use 100 to 150 lbs. per acre, according to soil conditions. Lb. 45c., 5 lbs. \$2.15, 10 lbs. \$4.00, 25 lbs. \$8.75.

Putting Green Mixture

For Ideal and Lasting Greens

There is a growing demand for a lawn grass mixture that will produce at home a turf as fine as on putting greens of golf clubs. For various reasons it is usually safer to sow a mixture of grasses than to depend upon one grass. To meet these needs we have prepared a formula from those superior grasses employed on golf courses—of known high purity and germination that the utmost of satisfaction may be secured.

We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 90c., 5 lbs. \$4.40, 10 lbs. \$8.50, 20 lbs. \$16.50,
50 lbs. \$41.00, 100 lbs. \$80.00.

Perry's Seashore Mixture

Many a Lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of four inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 sq. ft.

Lb. 60c., 5 lbs. \$2.75, 10 lbs. \$5.25, 25 lbs. \$12.50.

Mixtures for Permanent Meadows or Permanent Pastures

TRoubled With CRAB GRASS?

"Gone with the Wind" is the Remedy

Here is a unique preparation, successful in the West, for the control of the pest that becomes so disagreeable in the Fall. Simply dissolve the contents of the 8-oz. can in 5 gallons of water and spray over 660 sq. ft. of lawn. A compressed air sprayer is best, though a watering can may be used, only slightly discoloring the permanent lawn grasses for a brief period. 8-oz. cans only, \$1.00. Circular free.

Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form **Legume Aid** with instructions for use in every package.

WINTER RYE

SOW IT AS A COVER CROP

There are hundreds of gardens that can be benefitted by a Fall sowing of Winter Rye. As soon as crops are harvested in September and bare spots appear, scatter it in at the rate of 5 lbs. to a space 40x40 feet, rake in and allow to grow until April when all the growth can be turned under. Not only will it produce an abundance of roots and foliage and provide a green carpet over Winter but a lot of desirable humus will be added to the soil, the fertility improved and its mechanical condition bettered. It is a logical and sensible thing to do both on large and small areas because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been gathered, Fall planting of Winter Rye even as late as November would be desirable.

Rosen Winter Rye. Lb. 15c., 5 lbs. 40c., 14 lbs. 75c., 56 lbs. \$2.50.

PLANT PERRY'S HARDY LILIES

Most Lilies will succeed in any light, sandy or loamy soil, preferring an acid or a neutral soil. Plenty of Maplevale leafmold or decayed peat should be added to the soil, as practically all Lilies love leafmold. They are also partial to sharp, gritty sand. An excellent mixture is one-third loam, one-third leafmold or peat or combination, and one-third sand and well rotted cow or sheep manure.

Good drainage is an essential point. The preparation of the soil should be such as to provide ample moisture during the growing period, but without having an excess of water during the dormant period. When planting the bulbs it is well to surround them with sand or fine gravel. This helps to drain away surplus moisture and tends to repel worms.

Occasionally some Lilies do not appear above the ground the first year after planting, but come up strong and vigorous the second season.

For the most reliable information, consult **Lilies and Their Culture.** Craig. **\$3.15 postpaid.**

"Calyx" Spray

"Fourth" Spray

CONDENSED SPRAY SCHEDULE

For more complete information, consult bulletins issued by your State Experiment Station and Insecticide Manufacturers' recommendations. Directions will be found on most packages. We will not be responsible for results obtained.

APPLES.

"Dormant Spray"—primarily to kill Scale.

Dilute either Scalecide, the best oil emulsion, 1 part to 15 parts of water; or Lime Sulphur, if dry, 1 lb. to 12½ gals.; if liquid, 1 to 9.

"Delayed Dormant"—when buds begin to break but not after leaves are ½ inch long, for Red Mite and Scale. Use same spray as for Dormant, but add 1 oz. Black Leaf 40 to each 6 gals. of diluted mixture for Aphids.

"Pre-Pink"—before blossoms show pink, for Scab, Bud Moth and Tent Caterpillar. Dilute Liquid Lime Sulphur 1 to 50, or Dry Lime Sulphur 1 lb. to 12½ gals. with 1 lb. Arsenate of Lead to each 30 gals. of diluted mixture. Kayso, or Hydrated Lime (Sanilime) may wisely be added to avoid a danger of burning.

"Pink"—After blossoms have separated in the cluster, but before they open, for Scab, Red Bug, Aphids, Tent Caterpillar and Leaf Roller. Same as for Pre-pink, with 1 oz. Black Leaf 40 added to each 6 gals. of diluted mixture.

"Calyx"—After 90% of blossoms have fallen. (Never spray while the fruit buds are fully

open, for you spoil the set of fruit and may poison bees.) Use same materials as for Pre-pink, but increase Arsenate of Lead to 1 lb. to each 25 gals. of diluted mixture for Codlin Moth, Curculio, Gypsy Moth and Scab.

For Later Sprays—consult your Experiment Station Bulletin.

PEACHES.

"Fall Dormant"—for Leaf Curl, dilute Liquid Lime Sulphur 1 to 14, or Dry Lime Sulphur 1 lb. to 6 gals. of water.

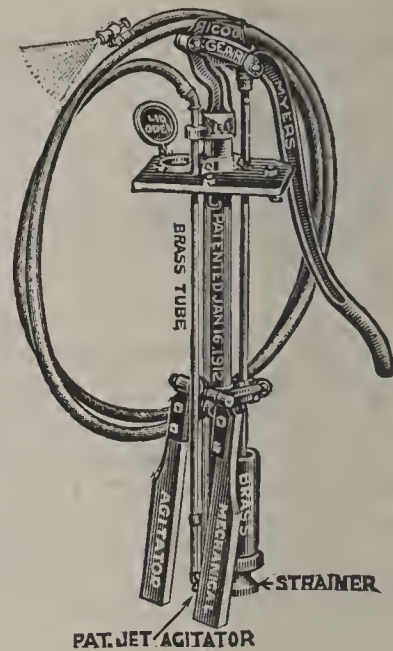

"Spring Dormant"—for Red Mite and Scale before buds start to swell. Dilute Scalecide, the best oil emulsion, 1 part to 15 parts of water.

"Pink"—for Brown Rot when blossoms show pink, use Wettable Sulphur, 1 lb. in 20 gals. of water.

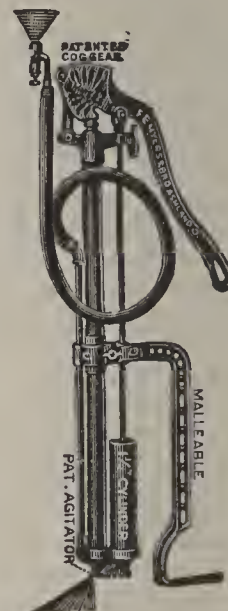

"Shuck"—for Brown Rot and Scab when shucks are splitting. Repeat Pink Spray.

"First Cover"—for Brown Rot, Scab and Curculio a week or ten days after Shuck Spray use Wettable Sulphur, as in previous sprays, adding 1 lb. Arsenate of Lead and 2 lbs. Hydrated Lime (Sanilime) to each 50 gals. of water.

"Second Cover"—Two weeks after First Cover for Brown Rot, using same spray as for Pink.
